

Increase in size and number of DDoS between 2018 and 2019

A Distributed Denial Of Service (DDoS) is an attack in which the perpetrator seeks to make a machine or service unavailable to its intended users.

Max sepulveda

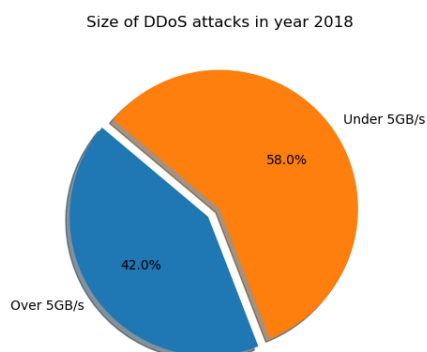

1 DDoS

You can also think of it as a person (perpetrator) blocking the entry of a coffee and this prevents other people (intended user) to enter the coffee (website or target)

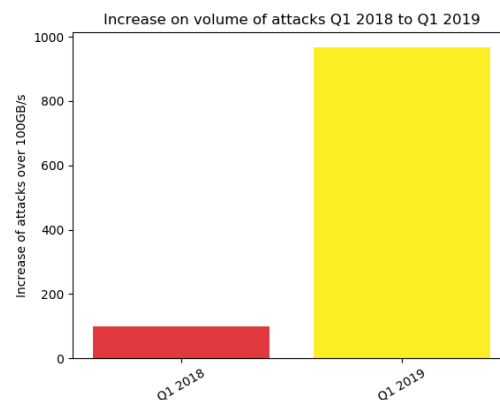

2 Comparison of size

58% of attacks in 2018 were bigger than 5GB/s, it looks like perpetrators are moving into larger attacks?

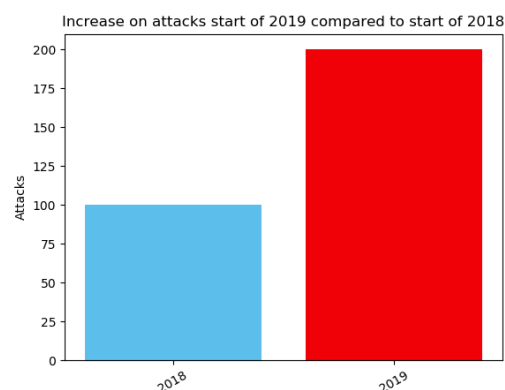

3 Volume of the attacks

A massive increase on the volume attacks Q1 2018 - Q1 2019.

4 Number of the attacks

Increase on attacks comparing the start of 2018 to the start of 2019.
